Adaptive Multi-scale Place Cell Representations and Replay for Spatial Navigation
and Learning in Autonomous Robots

by

Pablo Scleidorovich

For the Ph.D. degree in Computer Science and Engineering

Place cells are one of the most widely studied neurons in the brain hippocampus thought to play a vital role in spatial cognition. Studies show that place cell activity is highly correlated with the animal's location in an environment, forming "pl (v)49 (r)3.6.9 (g)4.9 (r)
